

Use this form to make your risk analysis

Help with your risk analysis

You should review:

- The food-related activities in your business
- The risks associated with these activities
- Your possibilities for controlling the risks - i.e., what are you doing to prevent that customers get sick from eating your food?

You should describe all of the activities in your business and identify the food-related activities that can pose a risk to food safety. This means you should identify what the Danish Veterinary and Food Administration (DVFA) calls 'critical activities'. These activities must be addressed in your own control procedures.

Identify critical activities

'Critical activities' are activities where you can control the process and prevent bacterial growth in or contamination of the food, etc.. For example, this could be through heating, hot holding or cooling the food.

Identify the critical activities by ticking them off in the form below. You should also describe how you will control your critical activities. A thorough description will help prevent problems with food safety. If you tick off a critical activity in the form, it should be reflected in your own control procedures.

Your risk analysis must be accessible

Your risk analysis must always be accessible in your business - either in a physical or digital form. You are required to present it to the Danish Veterinary and Food Administration during an inspection.

Use this form for your risk analysis.

You may adapt the form to the activities in your business. Only fill in the cells that are relevant to your situation. Not all the areas may apply to your activities. There may be some areas that you don't have to fill out and where you have no critical activities.

Briefly describe your business

Name and address of business:

The business has been registered with the DVFA (Fødevarestyrelsen) on (date):

Business owner:

CVR number (business registration) :

Brief description of your business:

Lasagne Hub ApS is a professional food service provider located in Copenhagen. We operate a kitchen dedicated to the preparation of hot and cold Italian-inspired dishes (pasta, lasagne, breakfast items) for on-site dining, takeaway, and external catering. Our workflow combines primary production from raw materials with the finishing of products from approved suppliers.

Risk analysis form

- What do you do - and what can you do - if something goes wrong?

Receipt of goods

Tick the box if yes, and if you have a critical activity

Explain what you do/make?

What could go wrong and what is the associated risk?

What process controls do you have to ensure food safety?

What do you do if something goes wrong?

NOTE: Follow own control procedures! (Get form at fvst.dk)

☐ I receive or buy packaged/unpackaged food that must be kept in refrigerated storage - e.g. dairy products, cold cuts, fresh meat, fresh fish, eggs, etc.

☐ Critical activity

☐ I receive packaged food that must be kept in frozen storage - e.g. frozen vegetables, frozen meat, frozen fish, frozen baked goods, etc.

☐ Critical activity
